DETAILED ACTION

The following action is in response to amendments filed February 1, 2007.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 1-8 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter. The invention as claimed in independent claim 1 is directed to a series of abstract ideas and is not directed to a practical application because the claim does not require any physical transformation and, as claimed, does not produce a useful, concrete, and tangible result. The method steps of determining the commanded speed of the electric motor, determining the actual speed of the motor, determining a parameter indicative of the slip and predicting a faulted condition in the operation of the air compressor system are all claimed as abstract ideas, which is a judicial exception to 35 U.S.C. 101 and is not statutory matter for patentability.

Allowable Subject Matter

Claims 9-16 are allowable.

The following is a statement of reasons for the indication of allowable subject matter:

The subject matter of the present invention differs from the teachings of the prior art in that the present invention according to claims 9-16 comprises in combination with the other limitations of independent claim 9 a controller comprising logic configured to determine actual slip wherein the value of the slip is defined by the relationship

Art Unit: 3746

Slip : $[ES - ((\text{number of active poles of the motor} / \text{total number of poles of the motor}) * CS)] / ES$,

wherein ES represents locomotive engine speed and CS represents compressor speed.
